

#### **GUNSON RESOURCES LIMITED**

#### QUARTERLY REPORT FOR THE PERIOD ENDED 30<sup>th</sup> SEPTEMBER 2005

#### **HIGHLIGHTS**

- Coburn Project Public Environmental Review progressed to its latter stages at the end of the quarter, with environmental approvals expected in early 2006.
- Value engineering study on the Coburn minesite concentrator concludes that the capital
  cost of this plant is almost identical to that estimated in the Bankable Feasibility Study
  (BFS) of December 2004.
- Firm prices received to date for the other items of equipment for the proposed Coburn mine are very similar in most cases to the December 2004 BFS estimates.
- Product offtake and toll treating negotiations for the Coburn concentrates are well advanced and scheduled for completion to MOU stage by the end of 2005.
- Discussions with potential debt and equity financiers continued, with lending offers expected by early 2006.
- The keenly anticipated drilling program for copper on the Mount Gunson Project now firmly scheduled to commence in late 2005.

# 1 COBURN MINERAL SAND PROJECT (WESTERN AUSTRALIA)

Effort during the quarter was focused on obtaining all the required approvals and contracts to enable a decision to proceed with mine development as soon as practicable.

The 8 week public review period of the Public Environmental Review (PER) was completed on 29<sup>th</sup> August and 18 submissions from government departments, non-government organisations, the local shire and some individuals were received. The main issues raised in the submissions were the impact on district groundwater supplies, the effectiveness of rehabilitation after mining and the impact on the nearby World Heritage Area of developing the northernmost open pit, Pit 10. The Company responded to the submissions on 4<sup>th</sup> October and the Western Australian Environmental Protection Authority (EPA) has indicated that it is aiming to complete its report to the State Minister for the Environment in early December 2005. A decision by the minister is anticipated early next year.

Negotiations with potential offtake partners, equipment suppliers and service providers are at an advanced stage and progress is outlined below.

#### 1.1 Public Environmental Review

The main concession made by the Company in its response to the public submissions discussed above was to remove the northern third of the Amy Zone ore body from the PER, Pit 10. Gunson has committed to complete more studies

to demonstrate that successful rehabilitation can be achieved and that Pit 10 can be developed without adverse impact on the World Heritage Area, before resubmitting this northern pit for approval in several years time. Mining is not scheduled in this area of the Project until year 13.

Removal of the northern area from the current PER has largely defused two of the main issues raised in the public submissions. In particular, the drawdown effects on district groundwater supplies and potential for brackish groundwater discharge into Shark Bay would be negligible. The remaining major issue, rehabilitation after mining, is to be managed by supporting an independent research organisation aimed at maximising rehabilitation efficiency as part of the Company's rehabilitation management plan.

Now that the contentious northern Pit 10 has been removed from the current PER, completion of the approval process should proceed in a timely manner. The anticipated timetable for the balance of the PER process is outlined below:

- EPA report to the Environment Minister released early December 2005
- Two week public appeals period mid to late December 2005
- Ministers decision early 2006
- Mining approvals early 2006

#### 1.2 Product Marketing

A further visit to potential offtake and joint venture partners in China was made in September. Discussions with other local and international parties interested in purchasing and/or toll treating the Coburn heavy mineral concentrates were also held during the quarter.

The Company now has a number of attractive alternatives for the commercial development of the Coburn Project and is in the process of making a decision on which alternative to accept. A decision is expected before the end of 2005.

#### 1.3 Minesite Concentrator and Bucket Wheel Excavators

In late August, Roche Mining – Mineral Technologies (Roche) completed a value engineering study on the minesite concentrator they had designed and costed for the Bankable Feasibility Study (BFS) last year. Despite significant increases in material and labour costs since 2004, the capital cost estimate for the concentrator came in at approximately the same as the BFS estimate, mainly via the omission of the wet high magnetic intensity separation stage. This results in a 4% higher waste heavy mineral content in the concentrates but slightly reduces the operating costs.

Roche are currently preparing a fixed price contract for the supply of a 2,200 tonne per hour concentrator, which is expected in November, 2005.

The other large equipment supply contract for the proposed mine is for two bucket wheel excavators – one to mine the ore and the other to mine the overburden. Suppliers of this equipment have indicated that current pricing will be similar to or less than the figure quoted in the BFS last year.

#### 1.4 Mine Service Contracts

Quotes for road construction, soil removal and overburden stacking have been received. Finalisation of contracts for these services, along with negotiation of electricity supply, concentrate haulage, borefield and other ancillary contracts should be completed in the current quarter.

#### 1.5 Financing

Discussions with selected banks were held during the quarter and firm expressions of interest from these banks will be invited in November. Potential debt levels have been indicated and lending offers are expected in January 2006.

#### 1.6 Resource Calculations

All assay results from the 2005 drilling program have been received and geological interpretation of the cross sections in the southernmost 3.5 kilometres of the ore body has commenced. A proven reserve for this zone should be ready by mid November.

#### 1.7 Overall Schedule

Assuming statutory and financial approvals in early 2006, the Company's schedule for commissioning of a mining operation at Coburn is the latter part of the March quarter, 2007. This is three months later than the schedule forecast previously.

# 2 MOUNT GUNSON COPPER PROJECT (SOUTH AUSTRALIA)

The proposed drilling program for copper at Chianti and Moseley Dam prospects, which was scheduled for late September, was again postponed due to the shortage of drilling rigs. A drill has now been confirmed for late 2005 and will begin the program at Chianti Prospect.

In August, the Company reduced the area of its tenements by 20% to 1,473 square kilometres. Due to the significant under expenditure at Mount Gunson in 2004/2005, the South Australian Department of Primary Industry and Resources increased the minimum exploration expenditure on the Project for 2005/2006 to \$250,000. This requirement is 11% above the previous minimum expenditure.

## 3 SHELL LAKES PROJECT (WESTERN AUSTRALIA)

Attempts to attract a joint venture partner during the quarter were unsuccessful and the Project was abandoned in early October.

# 4 TENNANT CREEK GOLD-COPPER PROJECT (NORTHERN TERRITORY)

A response from the Central Land Council (CLC) on the Company's comments regarding a draft legal agreement for access to aboriginal land was received on 7<sup>th</sup> September. Some amendments requested by the Company have been accepted by the CLC but others have not. Resolution of the outstanding issues is unlikely before next year.

# 5 BIRKIN NICKEL PROJECT (WESTERN AUSTRALIA)

Advice has been received that the Company's single exploration licence application at Burkin should be granted shortly. Reconnaissance ground magnetic and gravity geophysical surveys are planned once the tenement is granted.

#### 6 FINANCIAL

At 30<sup>th</sup> September, the Company had \$1.1 million in cash and short term deposits. This does not include a \$0.3 million R&D refund from the Australian Tax office due in early November 2005.

Forecast exploration and evaluation expenditure for the December quarter is \$500,000.

#### **Notes**

- The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- Issued and quoted securities The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- The definitions in, and provisions of, AASB 1022: Accounting for Extractive Industries and AASB 1026: Statement of Cash Flows apply to this report.
- Accounting Standards ASX will accept, for example, the use of International Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
